(192424166 G.N.SAISREE) Yes we support our Condition.. wt if is an emergency case ? without prior permission

Mounnila S P (192511188)

8 days ago

Accessing a computer system without permission is unauthorized access. Good intentions do not make an illegal act legal.

national cybersecurity

Mounnila S P (192511188)

8 days ago

permission is what makes hacking ethical. The moment someone accesses a system without authorization, it is no longer ethical hacking, every cybercriminal can simply say, *I WAS ONLY TRYING TO PROTECT ! the public laws* cannot be based on what people claim they intended; they must be based on what they actually did.

Bug Bounty Programs are encouraging cybersecurity or encouraging hacking?

11

Spectrum Chaser

Organizations stay a step ahead of real threats.

Mounnila S P (192511188)

8 days ago

Bug bounty programs encourage cybersecurity, because the ultimate objective is to create a safer digital environment for organizations and the public.

192325118- K. Lahari Hiring black hat hackers can create serious security risks because their past actions show a willingness to break rules. Cybersecurity companies should rely on trusted ethical hackers who follow legal and professional standards

Mounnila S P (192511188)

A person's past should not define their future, everyone deserves second chance?!

Mounnila S P (192511188)

8 days ago

If a former black hat hacker has reformed, demonstrated ethical conduct, and earned the company's trust, their expertise can become a valuable asset in defending against cyber threats!

real proofs are there!! History shows that rehabilitation is possible. Kevin Mitnick is a well-known example of a former black hat hacker who became a trusted cybersecurity consultant after serving his sentence and rebuilding his career.
